

Label Application

Cutting

Best Way to apply the label for Players and goalies is to cut around players leaving a little space around them. Then hold to the plastic player piece seeing if anything needs to be trimmed. These are custom labels and are made to fit the best fit possible to the plastic, the Goalie especially he may need to be trimmed exactly to his shape to fit exact, in a few instances I have had to trim the skate blade not even noticeable when applied..

Applying

I find this to work best. After I have a perfect cut I peel only a portion of the backing away (usually the head which works best) and hold the other part with the backing to the player, once exact I then apply peeled off portion (Head) of the sticker.

I then lift the rest of the backing by lifting it and peeling away the back and applying the rest of the label. This works best and I always have and fit exact to how I wish the label to fit

Remember, for best look possible use the white plastic players (Coleco, Munro, & Benej). These customs will look spectacular on your game using them
